ADDENDUM NO. 1

April 23, 2024

Whiteland Community High School Phase 2A
300 E. Main Street
Whiteland, IN 46184

TO: ALL BIDDERS OF RECORD

This Addendum forms a part of and modifies the Bidding Requirements, Contract Forms, Contract Conditions, the Specifications, and the Drawings dated April 2, 2024, by Lancer Associates Architecture. Acknowledge receipt of the Addendum in the space provided on the Bid Form. Failure to do so may subject the Bidder to disqualification.

This Addendum consists of Pages ADD 1-1 through ADD 1-2 and attached Specification Sections 01 21 00 – Revised Contract Allowances, Logistics Plan, Guideline Schedule, and Lancer Associates Architecture Addendum No. 1, dated April 23, 2024, consisting of 63 Pages, Specification Sections 11 68 33 – Field Events & Athletic Equipment, 32 18 23 – Track Surfacing Latex System, 32 31 13 – Chain Link Fencing and Gates, 33 14 17 – Site Water Utility Service Laterals, 33 42 00 – Stormwater Conveyance, and Drawings 100, 210, 302, 303, 400, 401, 402, 403, 500, 501, 600, 601, 700, 900, 901, 902, 903, 904, 1004, L101, L102, L201, L202, L402, ES102, ES103, and ES301.

A. SPECIFICATION SECTION 00 20 00 – INFORMATION AVAILABLE TO BIDDERS

Add the following Paragraphs:

E. WCHS Phase 2A Site Logistics plan dated April 23, 2024 is being issued as part of this addendum for reference by all contractors.
F. WCHS Phase 2A Guideline Schedule dated February 7, 2024 is being issued as part of this addendum for reference by all contractors.

B. SPECIFICATION SECTION 01 12 00 - MULTIPLE CONTRACT SUMMARY

A. Bid Category No. 1 – Site Construction

Add the following Specification Sections:

11 68 33 – Field Events and Athletic Equipment
32 18 23 - Track Surfacing Latex System

C. SPECIFICATION SECTION 01 21 00 – CONTRACT ALLOWANCES

1. Delete this section in its entirety and replace with the attached revised section.

SECTION 01 21 00 – ALLOWANCES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including amended General Conditions and other Division-1 Specification Sections, apply to work of this Section.

1.02 REQUIREMENTS INCLUDED

A. The Specifications contain Allowances for particular items, methods of construction, quantities of materials, labor for certain items and these stated Allowances shall be included in the total lump sum bid price.
   1. Should the final amounts as determined from actual costs vary from these stated Allowances, the Contract price will be adjusted by Change Order as stated in the Conditions of the Contract.
   2. Under no circumstances shall work exceeding the stated Allowance amounts, proceed without a properly executed Change Order.

B. A "Schedule of Allowances" showing amounts included in each prime Contract Sum, is included at the end of this Section.

C. Product/Materials Allowance: At the earliest feasible date after award of Contract, advise the Architect and Construction Manager of scheduled date when final selection and purchase of each product or system described by each Allowance must be accomplished in order to avoid delays in performance of the Work.
   1. As requested by the Architect, obtain and submit proposals for the work of each Allowance for use in making final selection; include recommendations for selection which are relevant to the proper performance of the Work.
   2. Purchase products and systems as specifically selected (in writing) by the Architect.
   3. Submit proposals and recommendations, for purchase of products or systems of Allowances, in form specified for Change Orders.
   4. When requested, submit a substantiated survey of quantities of materials, as shown in the "Schedule of Values", revised where necessary, and corresponding with Change Order quantities.
   5. Amount of Allowance includes:
      a. Net cost of product
      b. Delivery to the site
      c. Applicable taxes
   6. In addition to amount of Allowance, include in Bid, for inclusion in Contract Sum, Contractor's costs for:
      a. Handling at site, including unloading, uncrating and storage
      b. Protection from elements, from damage
      c. Labor, installation and finishing

d. Other expenses (e.g., testing, adjusting and balancing) required to complete installation
e. Overhead and profit

D. Contingency Allowance: Contingency allowance shall be used only as directed for Owner's purposes. Proposal shall be submitted by Contractor for work requested in format similar to that required for Change Orders. Compensation to the Contractor for work requested utilizing this Allowance shall be for only Contractor's costs as defined by Paragraph 7.3.7 of the General Conditions, except no compensation shall be allowed for overhead and profit. At time of Project closeout, unused amounts remaining in contingency allowance shall be credited to Owner by Change Order.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.01 PRODUCT ALLOWANCE

A. Bid category No. 01 SITE CONSTRUCTION - Band Tower (Concrete foundation should be included in the base bid.) $125,000

3.02 CONTINGENCY ALLOWANCES

Allow a lump sum additional work required but not indicated on Drawings or reasonably anticipated.

A. Bid Category No. 01 – SITE CONSTRUCTION $150,000
B. Bid Category No. 02 - ELECTRICAL $50,000

END OF SECTION 01 21 00

SITE DIMENSION NOTES

1. ALL NEW SIGNAGE AND PARKING LOT LIGHTS SHALL MATCH WHITELAND COMMUNITY HIGH SCHOOLS' EXISTING SIGNAGE AND LIGHTING. CONTRACTOR SHALL COORDINATE WITH OWNER, LANDSCAPE ARCHITECT (CONTEXT DESIGN), AND MEP DESIGNER FOR LIGHT STYLES AND LAYOUT.
2. CONTRACTOR SHALL NOTIFY ENGINEER, IF PROOF ROLL OF SUBGRADE FAILS, TO DETERMINE IF LIME STABILIZATION OF SUBGRADE IS NECESSARY.
3. ALL RADII DIMENSIONS ARE TO THE FACE OF PROPOSED CURB.
4. SIGNAGE SHALL INCLUDE ALL NECESSARY HARDWARE AND FITTINGS, INCLUDING 10 FT. OF 11 GAUGE FLANGED CHANNEL SIGN POST.
5. REFER TO LANDSCAPE AND ARCHITECTURAL PLANS FOR ADDITIONAL SIGNAGE. VERIFY CONFLICTS WITH OWNER, ARCHITECT, AND LANDSCAPE ARCHITECT.
6. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING TRAFFIC AND PROVIDING ALL NECESSARY FLAGMAN, BARRELS, SIGNAGE, ETC. DURING CONSTRUCTION. ALL APPLICABLE M.U.T.C.D. STANDARDS SHALL GOVERN THIS WORK.
7. LANDSCAPING PLAN TO BE PROVIDED BY CONTEXT DESIGN. CONTRACTOR SHALL COORDINATE WITH OWNER AND CONTEXT FOR SPECIFICATIONS.
8. EXISTING UTILITY SIZE AND MATERIAL INFORMATION SHOWN ON THESE PLANS ARE PER THE BEST GRAPHICAL AND VISIBLE INFORMATION AVAILABLE. CONFLICTS MAY EXIST AND IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO FIELD VERIFY ALL SIZING AND MATERIAL INFORMATION PROVIDED. IF ACTUAL CONDITIONS DIFFER FROM THAT INFORMATION SHOWN ON THE PLANS, THE CONTRACTOR SHALL, PRIOR TO THE INSTALLATION OF ANY PROPOSED INFRASTRUCTURE, NOTIFY THE DESIGN ENGINEER IMMEDIATELY.

6' Temporary Construction Fence Panels.

Temporary Stone (6" of #2 stone capped with 53s)

Utilize existing Band Practice Lot for parking and laydown.

PARKING ANALYSIS - PHASES 1A, 1 AND 2A

PARKING AREA & PHASE	EXISTING # OF SPACES		PROPOSED # OF SPACES		NET CHANGE IN # OF SPACES	
	A.D.A. ACCESSIBLE	STANDARD	A.D.A. ACCESSIBLE	STANDARD	A.D.A. ACCESSIBLE	STANDARD
"A" (PH 1A)	0	21	0	117	0	+96
"B" (PH 1A)	5	83	5	213	0	+130

LANCER ASSOCIATES ARCHITECTURE

ADDENDUM NO. ONE

PROJECT: **Whiteland Community High School Phase 2a**

PROJECT NUMBER: **22130**

DATE OF ADDENDUM: **April 23, 2024**

THIS ADDENDUM FORMS A PART OF THE CONTRACT DOCUMENTS AND IS ISSUED IN ACCORDANCE WITH THE INSTRUCTIONS TO BIDDERS. ACKNOWLEDGE RECEIPT OF THIS ADDENDUM BY SIGNING THE ADDENDUM ACKNOWLEDGMENT SECTION OF THE BID FORM.

SPECIFICATIONS

1. Section 33 4200 – Stormwater Conveyance:
   o Revised to include concrete headwall and trash & animal guard specifications per comments received from Johnson Co. Surveyor's Office outside review consultant comments.

2. Section 33 1417 – Site Water Utility Service Laterals:
   o Revised to include domestic service tap, water meter, meter pit, and domestic water service line specifications. Removed specifications for PVC casing conduit.

3. 11 68 33 FIELD EVENTS & ATHLETIC EQUIPMENT

   New section issued.

4. 32 18 23 TRACK SURFACING – LATEX

New section issued.

5. 32 31 13 CHAIN-LINK FENCING AND GATES

   Fence and Gate types updated.

DRAWINGS:

1. Sheet Number: G000
   Sheet Title: Cover
   Change:

   Add Sheet 1004 Miscellaneous Details to the index

2. Title Sheet (sheet 100):
   o Revised plan index to include added Miscellaneous Details (sheet 1004).
   o Added Johnson County Legal Drain Notes

3. Demolition Plan (sheet 210):
   o Revised to denote removal of existing trench drain in parking lot north of football field instead of salvage and reinstallation.

4. Site Dimension Plan (sheet 302):
   o Revised to include warning signs around proposed dry detention basin.
5. Site Dimension Plan (sheet 303):
   o Revised location of proposed shot put throwing area.
   o Revised to include warning signs around proposed dry detention basin.

6. Utility Plan (sheet 400):
   o Revised to include domestic water service tap, meter, meter pit, and water service line for future tennis building.
   o Revised sanitary sewer main and lateral layout so proposed lateral for future tennis building connects to the sewer main instead of the manhole. Revised Sanitary Sewer Structure Table based on revised layout. Remove sanitary lateral cleanout.
   o Revised Storm Culvert Data Table to indicate animal guards are required in the pipe end sections for Str. No. 69.

7. Utility Plan (sheet 401):
   o Revised Storm Culvert Data Table to indicate animals guards are required in the pipe end sections for Str. No. 80.

o Revised Storm Sewer Structure Table to indicate that a concrete headwall with animal guard is required for Str. No. 81 instead of the pipe end section previously shown.

8. Utility Plan (sheet 402):
   o Revised to include 6 LFT of Neenah R-4999-DD trench drain to replace drain removed in the existing parking lot north of the football field.
   o Revised Storm Culvert Data Table to indicate that one (1) concrete pipe end section and one (1) concrete headwall is required for Str. No. 104 instead of two (2) concrete pipe end section as previously shown. Storm Culvert Data Table was also revised to indicate that animal guards are required.
   o Revised Storm Sewer Structure Table to indicate that animal guards are required in the pipe end sections for Str. No. 102, 103, 105, and 106.

9. Utility Plan (sheet 403):
   o Revised Storm Sewer Structure Table to indicate an animal guard is required in the pipe end section for Str. No. 108.
   o Revised Storm Sewer Structure Table to indicate that a concrete headwall with animal guard is required for Str. No. 118 instead of the pipe end section previously shown.

10. Grading Plan (sheet 500):
    o Revised grading along south end of proposed dry detention/north end of discus field.

11. Grading Plan (sheet 50):
    o Revised grading of discus field and new shot-put area.

12. Drainage Plan (sheets 600-601):
    o Added detention pond warning sign detail.

13. Sanitary Plan and Profile (sheet 700):
    o Revised sanitary sewer profiles “SS-A” and “SS-B” to include sanitary lateral connection from tennis building lateral and to show proposed domestic water service crossing.

14. Overall Erosion Control Plan (sheet 900):
    o Revised end section riprap apron dimensions table to match revised Erosion Control Plans.

15. Erosion Control Plan (sheet 901):
    o Revised to include Notice of Intent posting, SWPPP board, dumpster, and port-o-let facilities near the intersection of Tracy Street and St. Charles Way.

o Added silt fence along the east side of the tennis court construction area.

16. Erosion Control Plan (sheet 902):
    o Extended riprap apron length from Str. No. 81 outlet pipe in response to Johnson Co. Surveyor's Office outside review consultant comments.
    o Added silt fence along the north and south sides of the outlet pipe and ditch from the proposed dry detention basin.

17. Erosion Control Plan (sheet 903):
    o Revised mulched seeding and construction limits around new shot-put throwing area.
    o Revised to include Notice of Intent posting, SWPPP board, dumpster, and port-o-let facilities near the proposed temporary construction entrance.
    o Extended riprap apron length from Str. No. 104 outlet pipe in response to Johnson Co. Surveyor's Office review comments.
    o Added silt fence along the north and south sides of the outlet pipe and ditch from the proposed dry detention basin.
    o Added temporary fabric drop inlet protection for existing inlets on the north side of the football field stadium.

18. Erosion Control Plan (sheet 904):
    o Extended riprap apron length from Str. No. 118 outlet pipe in response to Johnson Co. Surveyor's Office review comments.
    o Added silt fence along the north and east sides of the existing drive near the northeast corner of the high school.

19. Miscellaneous Details (sheet 1004):
    o Add sheet to include details for concrete headwall, water service tap, and 1 ½" & 2" commercial water meter pits.

20. <u>L101 SITE MATERIALS PLAN – PHASE 2A</u>

    - Updated to show extents of proposed fencing and gates at Football Stadium.
    - Legend updated to clarify fencing and gates.

21. <u>L102 SITE MATERIALS PLAN – PHASE 2A</u>

    - Updated to clarify fencing and gates around tennis courts.
    - Shot put ring and sector relocated.
    - Legend updated to clarify fencing and gates.

- Plan updated to show asphalt trail by tennis.

22. L201 SITE LAYOUT PLAN – PHASE 2A
    - Updated to show layout of proposed fencing and gates at Football Stadium.
23. L202 SITE LAYOUT PLAN – PHASE 2A
    - Shot put layout revised.
    - Plan updated to show asphalt trail by tennis.
24. L402 SITE PLANTING PLAN – PHASE 2A
    - Lawn extents around shot put revised.
25. Drawing Sheet ES102

    Drawing Sheet Title: Electrical Site Demolition Plan

    a) Drawing #1: Added plan note #7.

    b) Plan notes: Revised Plan notes.

26. Drawing Sheet ES103

    Drawing Sheet Title: Electrical Site Demolition Plan

    a) Drawing #1: Added plan note #5 and #6.

    b) Plan notes: Revised Plan notes.

27. Drawing Sheet ES301

    Drawing Sheet Title: Details and Schedules

    a) Revisions to Exterior Light Fixture Schedule

SECTION 11 68 33 – FIELD EVENTS & ATHLETIC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes equipment consisting of the following:
   1. Long Jump Take-off System.
   2. Long Jump Pit System with Sand Catch and Pit Cover.
   3. Discus Ring.
   4. Discus Cage System.
   5. Shot Put Circle and Toeboard.

B. Related Sections include the following:
   1. Division 31 Section "Earth Moving" for excavation and grading work.
   2. Division 32 Section “Synthetic Turf Construction” for equipment intended specifically within the synthetic field area, such as football goals and turf grooming equipment.
   3. Division 32 Section "Crushed Aggregate Surface" for edging system to retain Shot Put fill materials.

1.3 DEFINITIONS

A. HDPE: High-density polyethylene.

B. MDPE: Medium-density polyethylene.

C. PVC: Polyvinyl chloride.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For each type of track equipment, include materials, plans, details, method of field assembly, connections, and installation details.

C. Product Certificates: Signed by manufacturers of equipment and certifying that products furnished comply with all sanctioning body requirements for High School competition.

D. Installer Certificates: Signed by manufacturer certifying that installers comply with requirements.

E. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements.

F. Product Test Reports: From a qualified testing agency indicating playground equipment complies with requirements, based on comprehensive testing of current products.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has specialized in installing work similar in material, design, and extent to that indicated for this Project and who is acceptable to manufacturer of equipment.

B. Testing Agency Qualifications: An independent testing agency with the experience and capability to conduct the testing indicated, as documented according to ASTM E 548.

1.6 COORDINATION

A. Contractor shall supply all necessary labor and materials to fully install the described track equipment for competitive use based upon NFHS guidelines. All required formwork, bracing, fastening and installation procedures required to implement the equipment shall be included within the base-bid. Sequence work so equipment can be installed concurrently with concrete foundations, platforms, and adjacent resilient surfacing.

PART 2 - PRODUCTS

2.1 PRODUCTS AND MANUFACTURERS

A. Products: Subject to compliance with requirements, provide complete track equipment systems as indicated in the Drawings.

B. Manufacturers: The products identified below are intended as a basis of design, not as a proprietary limitation to competitive bidding. Other manufacturers are encouraged to submit product information to the Landscape Architect to be reviewed for equality during the bidding process. All such requests shall arrive no less than ten (10) days prior to bid opening.

C. Long Jump Take-Off System: Subject to compliance with requirements, provide products from the following manufacturer, or approved equal prior to bidding.
1. #4352S Aluminum High School Take-Off Board Tray System, as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL, 61822, Phone 1-800-637-3090.
2. Also provide manufacturer long jump pit covers for the Owner’s use.
3. Install per all manufacturer’s recommendations. Include all accessories for a complete system ready for use, including but not limited to pilot holes, drainage weeps, braces, and forms required for installation and maintenance.

D. Long Jump Pit System with Sand Catch and Pit Cover: Subject to compliance with requirements, provide products from the following manufacturer, or approved equal prior to bidding.

1. Sand Pit Form with Sand Catchers Series and Cover Model Numbers F44026 and F44026C as Manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL, 61822, Phone 1-800-637-3090.
2. Install per all manufacturer's recommendations. Include all accessories for a complete system ready for use, including but not limited to pilot holes, drainage weeps, braces, and forms required for installation and maintenance.
3. Pre-approved Equals:
   a. JumpForm H.S. Sand Pit Forming System with Covers Model Numbers SP6020 and equivalent Pit Cover Set as manufactured by Sportsfield Specialties Inc. Delhi, NY 13753, Phone 1-888-975-3343.

E. Discus Ring: Subject to compliance with requirements adhering to the latest 34.92 degree throwing sector requirements, provide products from the following manufacturer, or approved equal prior to bidding.
1. #370 Depressed Pad Discus Circle, as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL, 61822, Phone 1-800-637-3090.
2. Install per all manufacturer's recommendations. Include all accessories for a complete system ready for use, including but not limited to pilot holes, drainage weeps, braces, and forms required for installation and maintenance.

F. Discus Cage: Subject to compliance with requirements and adhering to the latest 34.92 degree throwing sector requirements, provide products from the following manufacturer, or approved equal prior to bidding.
1. #8020 High School Discus Cage, as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL, 61822, Phone 1-800-637-3090.
2. Install per all manufacturer's recommendations. Include all hardware, netting, fasteners sleeves and halyards required for installation and competitive use of a complete system.

G. Shot Put Circle and Toeboard: Subject to compliance with requirements adhering to the latest 34.92 degree throwing sector requirements, provide products from the following manufacturer, or approved equal prior to bidding.
1. #363 and #369 Depressed Pad Shot Put Circle and Toeboard, as manufactured by Gill Athletics, 2808 Gemini Court, Champaign, IL, 61822, Phone 1-800-637-3090.
2. Install per all manufacturer's recommendations. Include all accessories for a complete system ready for use, including but not limited to pilot holes, drainage weeps, braces, and forms required for installation and maintenance.

2.2 GENERAL

A. Colors: As selected by Landscape Architect from manufacturer's standard colors during Shop Drawing and Submittal Review process.

2.3 MATERIALS

A. Opaque Plastic: Color impregnated, UV stabilized, and mold resistant.

B. Hardware and Fasteners: Manufacturer's standard, commercial-quality, corrosion-resistant, stainless steel, or aluminum; secure, vandal-resistant design.

C. Drainage Fill: Washed coarse-aggregate mixture of crushed stone, or crushed or uncrushed gravel, as required to properly install and drain the system.

D. Paint and PVC-Coat Finish: Comply with 16 CFR 1303 for limiting lead in paint.

2.4 CAST-IN-PLACE CONCRETE

A. Concrete Materials and Properties: Comply with requirements in "Cast-in-Place Concrete" to produce normal-weight, air-entrained concrete with a minimum 28-day compressive strength of 3,000 psi (20.7 MPa), 3-inch (75-mm) slump, and 1-inch- (25-mm-) maximum size aggregate.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements for site clearing, earthwork, site surface and subgrade drainage, and other conditions affecting performance.
   1. Do not begin installation before final grading required for athletic surfacing is completed, unless otherwise permitted by Landscape Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Verify locations of track equipment to IHSAA and NFHS guidelines. Verify that layout and equipment locations comply with requirements for each type and component of equipment.

3.3 CLEANING

A. After completing equipment installation, inspect components. Remove spots, dirt, and debris. Repair damaged finishes to match original finish or replace component.

END OF SECTION

SECTION 32 18 23 – TRACK SURFACING – LATEX SYSTEM

PART 1 - GENERAL

1.1 DESCRIPTION

A. Furnish and install Plexitrac® Running Track resilient surfacing, or approved equal prior to bidding, over on an accepted pavement profile.

1. Include new track coating for long jump runways.
2. Latex coatings to be Red in color.

1.2 RELATED SECTIONS

A. Division 32 – Asphalt Paving.

B. References
1. National Asphalt Pavement Association (NAPA)
2. USA Track & Field (USATF)
3. National Federation of State High School Associations (NFHS)
4. International Association of Athletics Federation (IAAF)
5. American Sports Builders Association (ASBA)

1.3 QUALITY ASSURANCE

A. Asphalt surface shall comply with the guidelines of the ASBA and NAPA for surface planarity and density.

B. All liquid materials shall be from a single source and manufactured for the purpose of resilient track construction.

C. The contractor shall record the batch number of each product used on the site and maintain it throughout the warranty period.

D. The contractor shall provide the owner with an estimate of the volume of each liquid product and the weight of the rubber granule to be used on site.

E. The installer shall be an Authorized Applicator of the specified surface system.

F. A manufacturer’s representative shall be available to help resolve material issues.

1.4 SUBMITTALS

A. Current material safety data sheets (MSDS) for the liquid components.

B. A certificate from the manufacturer of the binders, adhesives and coatings stating that all materials have been produced specifically for use in sports surfacing construction.

C. A complete list of materials intended to be used in the construction of the running track system. All liquid quantities will be prior to dilution.

D. Reference list from the installer of al least 5 projects of similar scope done in each of the past three years.

E. Product substitution: If other than the product specified, the contractor shall submit at least 7 days prior to the bid date a complete type written list of proposed substitutions with sufficient data, drawings, samples and literature to demonstrate that the proposed substitution is of equal quality and utility to that originally specified. Information must include a QUV test of at least 1,000 hours and IAAF test information for the system to be installed.

F. Alternative Products: Should an alternate bid product be presented by a Vendor for consideration by the Landscape Architect, that system shall comply with all manufacturer recommendations for a high performance, durable system.

1.5 MATERIAL HANDLING AND STORAGE

A. Store material in accordance with manufacturer's specifications and MSDS.

B. Deliver products to the site in original, unopened containers with labels attached.

C. All surfacing materials shall be non-flammable.

1.6 GUARANTEE

A. The installer and the materials manufacturer shall supply a warranty covering labor and materials respectively. The warranty period shall be for three (3) years, including all labor and materials, plus replacement of any striping or furnishings displaced by repairs.

B. All test reports will be contracted directly by the Owner with the testing agency.

1.7 INSTALLER QUALIFICATIONS

A. Installers shall be routinely engaged in the construction and surfacing of running tracks.

B. Installer shall be an authorized applicator of the specified system.

C. Installer shall be a builder member of the ASBA.

D. Provide written proof of bonding capacity for the total amount of the athletic surfacing, if subcontracted, upon the request of the Landscape Architect.

1.8 MANUFACTURER QUALIFICATION

A. Material supplier shall certify that the materials provided are manufactured specifically for construction and surfacing of running tracks.

B. Manufacturer shall be a member of the ASBA.

PART 2 - PRODUCT

2.1 MANUFACTURER

A. Plexitrac Running Track System or Equal System
   1. The identified manufacturer and system has been utilized as a basis for quality and execution of the athletic surfacing requirements. It is NOT intended to limit competition. Other manufacturers and installers are encouraged to submit qualifications and technical data to demonstrate equality of their system.
   2. Subject to compliance with all aspects of this specification, the following Pre-Identified installers may submit equivalent surfacing systems for consideration. Other companies will be reviewed on an as-requested basis up to ten (10) days prior to Bid Opening.
      a. LESLIE COATINGS
      b. REESE SEALCOATING
      c. MIDWEST TRACK BUILDERS

B. Any materials used must be an emulsion/water-based product. Any products which require solvents such as MEK, Butyl Cellusolve or Acetone for clean up or mixing are unacceptable.

C. Materials must have a VOC less than 150g/lt. for binder products. Top coats shall have a VOC of less than 100g/lt. measured by EPA method 24.

D. Materials may not have a flash point of less than 200°F.

2.2 MATERIALS

A. CP-4125: Latex emulsion Primer. SBR emulsion
   1. Percent solids by weight, minimum 50%
   2. Weight, 8.35 lbs./gallon

B. Plexitrac Binder: Shall comply with Specification 10.73 of California Products Corporation
   1. High Viscosity Polyresin Blend
      a. Percent solids by weight, minimum 44.7%
      b. Weight, 8.47 lbs./gallon

C. Plexicolor Pigment: Water-borne dispersed pigment for enhanced color

D. Plexitrac Coating- Shall comply with Specification 10.70 of California Products Corporation
   1. Highly Pigment Polyresin Top Coat
      a. Percent solids by weight, minimum 47.4%
      b. Weight, 8.45 lbs./gallon

E. Rubber Granules: Specifically gradated 3-6, 2-4 & 1-3MM SBR particles for job mixing with the Binder

F. Water: The water to be used in the mixture must be fresh and potable

G. The installer will provide to the Landscape Architect a materials list prior to the installation of the volume of materials to be used on the project. The list will include the following:
   1. Specified thickness 8 MM.
   2. Pounds of Rubber 9.5 lb. sq./y SBR
   3. Gallons of CP-4125 (Undiluted) .05 gal. / sq.yd.
   4. Gallons of Black Binder (Undiluted) .57 gal. per / sq. yd.
   5. Gallons of Black Coating (Undiluted) .1 gal. / sq.y

H. The installer will furnish the Landscape Architect with a proof of delivery that the correct volume of product has been provided. The installer will also verify that a sole manufacturer has supplied all binders and coatings.

PART 3 - EXECUTION

3.1 WEATHER LIMITATIONS

A. Ambient and surface temperatures must be 50°F and rising.

B. Installation should not be conducted during rainfall or when rainfall is imminent.

C. Do not apply when surface temperature is in excess of 140°F.

3.2 SURFACE PREPARATION

A. Provide required asphalt base and surface courses as described and specified in Specification Section 32 12 16.

B. New asphalt shall be allowed to cure for a minimum of 14 days prior to the application of any surfacing materials.

C. The surface must be thoroughly cleaned of all loose dirt and debris prior to resilient coatings.

3.3 RESILIENT SURFACE INSTALLATION

A. After curing and preparation the asphalt shall be primed/tack coated with CP-4125 at the rate of 0.05 gal/sy. by means of an air diaphragm pump. Do not allow material to puddle on the asphalt surface.

B. Apply consecutive layers of dry 3-6mm, 2-4mm & 1-3mm Black SBR granules to the tack coated surface by mechanical spreader or by hand. Avoid leaving dry rubber granules more than one layer thick.

C. Apply Binder at the rate of 0.567 gallon per sq. yd. by means of an air diaphragm pump. Care should be taken to uniformly spray the granules so they are fully encapsulated.

D. Apply coating at the total rate of 0.1 gallon per square yard. Product shall be applied in two applications by an air diaphragm pump spray unit. One application shall be applied clockwise, the other counter-clockwise.

3.4 MARKING AND MEASUREMENTS

A. Restore all existing markings following rebuffing. Markings shall include all events and marks required or recommended by the National Federation of State High Schools, including all updates and rule changes that may be adopted prior to Substantial Completion.

B. Wait 48 hours after surface completion before applying line marking. The installer shall:
   1. Locate and establish all control points and radii via a licensed Surveyor.
   2. Layout all lines and markings to tolerances set forth by ASBA and governing body requirements.
   3. Prepare all necessary drawings.
   4. Provide all computations and measurements in organized form.
   5. Establish all locations on the curves using a Transit or Theodolite capable of reading direct to 20 seconds.
   6. Identify all markings, where appropriate, by painting the identification directly onto the track surface in 4” letters just below or in front of each mark in the right-hand portion of the lane.
   7. Paint all of the large, 3’ high, lane numbers in alternating colors of ‘white’ and ‘yellow’, utilizing shadowed backgrounds. Confirm final paint colors during submittal process.
   8. All lines shall receive sufficient paint to assure complete opacity and uniformity of color. Provide multiple coats until opacity is fully achieved.
   9. Paints shall be used directly from original containers and shall be thinned only when hot temperatures dictate thinning for smooth applications.
   10. Amount of paint used shall be as recommended by the manufacturer.
   11. Line paint shall be 100% acrylic latex. All measurements shall be made by competent, experienced and qualified personnel utilizing accurate transit data.

END OF SECTION

SECTION 32 31 13 - CHAIN LINK FENCING AND GATES

PART 1 – GENERAL

1.01 RELATED DOCUMENTS AND WORK

A. Drawings and general provisions of Contract, including General and Supplementary Conditions, apply to work of this Section.

1.02 DESCRIPTION OF WORK

A. Furnish and install all sliding gates and barrier gates as indicated in or implied by the Contract Documents. Include all posts, footings, supports, guides, stays, bracing, bearing hanger sheaves, overhead framing and supports, fasteners, hardware, and accessories required for a complete and full system.

B. All fencing, fabric, and accessories in the Base Bid shall be Black vinyl coated, unless otherwise noted.

C. Fencing Applications:

1. 10’ height Black Vinyl Coated Chain Link Fencing
2. 4’ width single swing man-gates (at 7’ height)
3. **6’ height Black Vinyl Coated Chain Link Fencing**
4. **6’ width single swing man gate**
5. **8’ width double swing gate**
6. **10’ width double swing gate**

1.03 QUALITY ASSURANCE

A. Provide chain link fences and gates as complete units controlled by a single source including accessories, fittings, and fastenings.

B. Standards: Chain Link Fence Manufacturers Institute-Product Manual.

C. Erector Qualifications: Successful completion of not less than ten installations of similar size and magnitude to work required in this project.

D. Installation: ANSI/ASTM F567.

1.04 SUBMITTALS

A. Product Data: Submit manufacturer's technical data for metal fencing, fabric, gates and accessories.

B. Shop Drawings: Details of fabrication and installation, including gates, posts, fasteners, bracing, supports, accessories, hardware and footings. The successful Contractor shall participate in refining the design and

structural requirements of fencing systems during the submittal review process. Minor enhancements shall be provided at no additional cost to the Owner.

C. Material Certificates: Provide copies of material certificates signed by material producer and Contractor, certifying that each material item complies with or exceeds the specified requirements.

D. Samples: Black vinyl coating.

PART 2 - PRODUCTS

A. GENERAL

B. Any discrepancy noted between Specifications, Plan drawings, and Details shall default to the greater quantity, material, or structural requirement.

C. Dimensions indicated for pipe sections are outside dimensions, exclusive of coatings.

D. Manufacturer: Subject to compliance with requirements, provide products of one of the following or equal:
1. PVC Coated Galvanized Steel Fencing and Fabric:
   a. American Fence Corp.
   b. Anchor Fence, Inc.
   c. United States Steel.
   d. Colorguard Corp.
2. Aluminized Steel Fencing and Fabric:
   a. Page Fence Div./Page-Wilson Corp.
   b. Cyclone Fence/United States Steel Corp.

2.02 FABRIC

A. Fabric: No. 9 gage (0.148" + 0.005") size steel wires, 1 3/4" mesh, with top and bottom selvages knuckled when 6’ or under fabric and one end twisted (top) for 10’ fabric.
1. Furnish one-piece fabric widths for fencing up to 12' high.
2. Fabric Finish: Minimum 7 mil polyvinyl chloride (PVC) plastic resin finish over galvanized steel wire. Black in color.
3. Comply with ASTM F668, Class 2b, except provide fabric with diameter (gage) of core wire equivalent to fabric diameter specified when measured prior to application of nonmetallic coating.

2.03 FRAMING AND ACCESSORIES

A. Steel Framework, General: SS40 galvanized steel, ASTM F1083 or A1011. Weights shown below are based on Type I SS 40 steel pipe;

B. Fittings, Framework, and Accessories: Provide framework, fittings and accessories in accordance with manufacturer's standard thermally bonded polyvinyl chloride (PVC) plastic resin finish over galvanizing, not less than 10 mils (0.010") thick. Black in color.

C. End, Corner and Pull Posts: Minimum sizes and weights as follows:
1. Up to 4' fabric height, 2.375" OD steel pipe, 3.12 lbs. per lin. ft.
2. Up to 8’ fabric height, 2.875" OD steel pipe, 4.64 lbs. per lin. ft.
3. Up to 10’ Fabric height, 3.50” OD steel pipe, 5.71 lbs. per lin. ft.

D. Line Posts: Shall be evenly spaced at distances not to exceed 8' o.c. maximum.
   1. Up to 4' fabric height, 1.900" OD steel pipe, 2.28 lbs. per lin. ft.
   2. Up to 10’ fabric height, 2.875" OD steel pipe, 4.64 lbs. per lin. ft.

E. Gate Posts: Furnish posts for supporting single gate leaf, or one leaf of a double gate installation, for nominal gate widths as follows:

Leaf Width	Gate Post	Lbs./lin. ft.
Up to 6'	2.875” OD pipe	4.64
Over 6'	3.500" OD pipe	5.71

F. Top Rail: Manufacturer's longest lengths, with expansion type couplings, approximately 6" long, for each joint. Provide means for attaching top rail securely to each gate corner, pull and end post.
   1. No less than .1660” OD pipe, 1.84 lbs. per ft.

G. Center and Bottom Rail: Of the same grade and quality as the top rail. Install in one piece between posts and flush with post on fabric side, using offset fittings where necessary. Refer to drawings for location of center rail

H. Wire Ties: 11 gage galvanized steel to match fabric core material.

I. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same materials as top rail for brace, and truss to line posts with 0.375" diameter rod and adjustable tightener.

J. Post Tops: Provide weather tight closure cap with loop to receive tension wire or top rail; one cap for each post.

K. Stretcher Bars: One-piece lengths equal to full height of fabric, with minimum cross-section of 3/16" x 3/4". Provide one stretcher bar for each gate and end post, except where fabric is integrally woven into post.

L. Stretcher Bars Bands: Space not over 15" o.c., to secure stretcher bars to end, corner, pull, and gate posts.

2.04 GATES

A. Fabrication: Fabricate perimeter frames of gates from metal and finish to match fence framework. Assemble gate frames by welding or with special fittings and rivets, for rigid connections, providing security against removal or breakage connections. Provide horizontal and vertical members to ensure proper gate operation and attachment of fabric, hardware and accessories. Space frame members maximum of 8' apart, unless otherwise indicated.
   1. Provide same fabric as for fence, unless otherwise indicated. Install fabric with stretcher bars at vertical edges and at top and bottom edges. Attach stretcher bars to gate frame at not more than 15" o.c.
   2. Install diagonal cross-bracing consisting of 3/8" diameter adjustable length truss rods on gates to ensure frame rigidity without sag or twist.

B. Swing Gates: Fabricate perimeter frames of minimum 1.660" OD, 1.84 lb. per lin. ft., galvanized pipe, PVC coated.

C. Gate Hardware: Provide hardware and accessories for each gate, galvanized per ASTM A 153, and in accordance with the following:
   1. Hinges: Size and material to suit gate size, nonlift-off type, offset to permit 180-degree gate opening. Provide no less than 1-1/2 pair of hinges for each leaf over 6' nominal height.

2. Latch: Forked type or plunger-bar type to permit operation from either side of gate, with padlock eye as integral part of latch.
3. Keeper: Provide keeper for vehicle gates, which automatically engages gate leaf and holds it in open position until manually released.

D. Grounding Accessories: Ground rods shall be 3/4 inch diameter copper clad steel rods, 10 feet long. Connection wire not less than No. 4 AWG stranded copper wire. Provide approved clamp type fittings for rods and fence posts. Provide flexible bond straps for gates and gate posts.

E. Setting: Provide concrete footings consisting of Portland Cement, ASTM C 150, aggregates ASTM C33, and clean water. Mix materials to obtain concrete with a minimum 28-day compressive strength of 3,000 psi using at least 4 sacks of cement per cu. yd., 1" maximum size aggregate, maximum 4" slump, and 5% to 7% entrained air. Meet or exceed minimum footing depths for local frost conditions, unless more restrictive language is called for in Plans or Specifications.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Do not begin installation and erection before final grading is completed, unless otherwise permitted.

B. Verify that asphalt and concrete paving in fence location is completed and without irregularities which would adversely affect installation of fence.

C. Do not commence work until unsatisfactory conditions have been corrected.

D. Excavate hole depths approximately 3" lower than post bottom, with bottom of posts set not less than 42" below finish grade surface. Diameter of holes shall not be less than four times the largest cross section of the post.

E. Check each post for vertical and top alignment and hold in position during placement and finishing operations.

F. Dispose of all debris off-site. Dispose of waste excavated earth as directed by the Construction Manager on-site.

G. Top Rails: Run rail continuously through post caps, bending to radius for curved runs. Provide expansion couplings as recommended by fencing manufacturer.

H. Center and Bottom Rails: Provide bottom rails for all tennis fencing and center rails for all 10’ height applications and associated transitions. Install in one piece between posts and flush with post on fabric side, using special off set fittings where necessary.

I. Brace Assemblies: Install braces so posts are plumb when diagonal rod is under proper tension.

J. Fabric: Leave approximately 1” between finish grade and bottom selvage, unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires (when applicable). Stretch fabric between terminal posts or at intervals of 100 feet maximum whichever is less. Install fabric on security side of fence, and anchor to framework so that fabric remains in tension after pulling force is released.

K. Stretcher Bars: Thread through or clamp to fabric 4" o.c., and secure to posts with metal bands spaced 15" o.c.

L. Gates: Install gates plumb, level, and secure for full opening without interference. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

M. Tie Wires: Use U-shaped wire, conforming to diameter of pipe to which attached, clasping pipe and fabric firmly with ends twisted at least two full turns. Bend ends of wire to minimize hazard to persons or clothing.
1. Tie fabric to line posts, with wire ties spaced 12" o.c. Tie fabric to rails and braces, with wire ties spaced 24" o.c. Tie fabric to tension wires, with hog rings spaced 24" o.c.

N. Fasteners: Install nuts for tension bands and hardware bolts on side of fence opposite fabric side. Peen ends of bolts or score threads to prevent removal of nuts.

3.02 GROUNDING

A. Fence shall be grounded at each side of every gate. Each fence post to be grounded shall be connected to a ground electrode driven not less than 11 feet into the ground with rod located at the fence line or as near the fence line as practicable. Connection of fence post to ground electrode shall be made below grade by approved clamp-type fitting of copper on fence post and electrode. Each gate panel shall be bonded with a flexible bond strap to its gate post.

3.03 ADJUST AND CLEAN

A. Adjust brace rails and tension rods for rigid installation. Tighten hardware, fasteners and accessories. Remove excess and waste materials from project site.

END OF SECTION

SECTION 33 1417 – SITE WATER UTILITY SERVICE LATERALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Installation of domestic water service, including but not limited to, the service tap, stainless steel tapping sleeve, corporation stop, curb stop, valve box, water meter pit, water meter, meter setting, fittings, meter valves, backflow preventer, ductile iron mechanical joint fittings, restraints, and domestic water service line.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Contractor shall submit shop drawings, manufacturer information, details, material descriptions, and dimensions of individual components for the following:

a. SDR-21 PVC pressure pipe

b. Curb stop and valve box

c. Corporation stop

d. Meter pit and lid/cover

1.4 REGULATORY COMPLIANCE

A. The Contractor shall be responsible for ensuring all domestic water service components are installed in accordance with the Town of Whiteland and American Water Works Association (AWWA) requirements.

1.5 PROJECT CONDITIONS

A. The Contractor shall verify size and location of the domestic water service line and water meter with the MEP engineer and Town of Whiteland prior to construction. Contractor shall report discrepancies to the Owner and Engineer immediately.

B. The Contractor shall field verify the location, size, and elevation of other existing utility conveyances including sanitary sewer, storm sewer natural gas, electric, and telecommunication cables/ducts prior to construction and immediately report conflicts or discrepancies to the Owner and Engineer.

C. Material substitutions must be approved in writing by the Engineer.

PART 2 - PRODUCTS

2.1 TRACER WIRE

A. Provide blue colored, 10-gauge solid copper insulated locating (tracer) wire taped to the top of all fire protection distribution piping.

2.2 POLYVINYL CHLORIDE (PVC) PIPE

A. Provide solid wall SDR-21 PVC pressure pipe conforming to ASTM D2241 and NSF-61 with gaskets meeting ASTM F477 and joints complying with ASTM D3139.

B. Provide C900 PVC pipe with a minimum pressure class of 200 PSI (DR21) or greater.

2.3 DUCTILE IRON (DI) FITTINGS AND BENDS

A. All fittings and bends shall be ductile iron (DI) with mechanical joints (MJ) conforming to AWWA C-110, C-111, C-153, and NSF-61.

B. All fittings and bends shall be restrained as required by these specifications.

2.4 RESTRAINTS

A. Meg-A-Lug retainer glands as manufactured by EBBA Iron, Inc. shall be installed on each side of fittings and bends. Additional sets of retainer glands shall be installed at pipe lengths above and below the fittings as indicated in the construction plans (see “Restrained Joints” table on Miscellaneous Details – sheet 1002). Field-Lok gaskets or one bolt restrained fittings may be used in lieu of retainer glands.

2.5 TAPPING SLEEVES AND VALVES

A. Tapping sleeves and valves shall be EJP or Mueller H-615, H-616 or stainless steel sleeves. Tapping valves shall be 2360 series by Muller or AFC 2500.

2.6 CORPORATION STOPS

A. Corporation stops shall be as manufactured by Mueller Company.

2.7 CURB STOP AND BOXES

A. Curb stop shall be B-44-400-44 as manufactured by Ford Manufacturing.

2.8 METER PIT

A. Meter pit shall consist of a 36” diameter reinforced concrete pipe (RCP) or dual wall HPDE pipe (48” minimum height).

PART 3 - EXECUTION

3.1 GENERAL

A. Permits and Codes: The intent of this section of the specifications is that the Contractor's bid on the work covered herein shall be based upon the drawings and specifications but that the work shall comply with all applicable codes and regulations as amended by any waivers. The contractor shall furnish all bonds necessary to get permits for cuts and connections to existing domestic water distribution systems.

B. Contractor shall be responsible for confirming, coordinating, and scheduling all necessary inspections by the Town of Whiteland related to this work.

1. Contractor shall coordinate with the Town of Whiteland Department of Public Works for the Town furnished water meter.

C. Local Standards: The term "local standards" as used herein means the standards of design and construction of the Town of Whiteland Department of Public Works and Town of Whiteland Design Standards and Specifications Manual.

D. Existing Improvements: The Contractor shall maintain in operating condition all active utilities, sewers, and other drains encountered in the sewer installation. The Contractor shall repair to the satisfaction of the Owner any damage to existing active improvements.

E. Utilities: It shall be the responsibility of the Contractor to verity all existing utilities and conditions pertaining to his work. It shall also be the Contractor's responsibility to contact the owners of the various utilities before work is started. The Contractor shall notify in writing the Owner and Engineer of any changes, errors, or omissions found on these plans or in the field before work is started or resumed.

F. Workmanship: This work shall conform to all local, state, and national codes and to be approved by all local and state agencies having jurisdiction.

3.2 TRENCH EXCAVATION

A. Excavate trenches to the widths and depths as indicated on the construction plans and details and in accordance Section 31 20 00 Earthwork.

3.3 PIPE INSTALLATIONS

A. Contractor shall install domestic water service piping in accordance with the applicable sections of the following reference documents:

1. ASTM F1668 – Standard Guide for Construction Procedures for Buried Plastic Pipe
2. AWWA C600 – Installation of Ductile Iron Mains and Appurtenances
3. AWWA Manual M23 – PVC Pipe Design and Installation

B. Excavate trenches in accordance with the details included in the construction plans and Section 31 20 00 Earthwork. Where pipe is to be place in fill sections, a portion of the fill shall be constructed and compacted in accordance with the specifications prior to pipe installation.

C. Sheet and brace trenches as necessary to protect workmen and adjacent structures. All trenching to comply with current Occupational Safety and Health Administration (OSHA) standards. Keep trenches free from water while construction is in progress. Under no circumstances shall pipe or appurtenances be laid in standing water. Conduct the discharge from trench de-watering to appropriately designed and sized dewatering bags or basins prior to discharging into storm sewer drains or natural drainage channels.

D. Install #8 compacted aggregate for bedding of flexible pipe in 6-inch lifts. Compaction shall be accomplished by hand or mechanical tamping or walking the granular material in. PVC pipe shall not be blocked for support. The practice of blocking pipe up to grade with bedding material then backfilling underneath the pipe is prohibited. The entire length of the bed section shall be at the proper grade before installing pipe.

E. Install PVC pipe on a firm, uniform foundation of bedding material under the entire lower quadrant of the barrel. No weight shall be supported by the pipe bell.

F. Where PVC pipe is to be installed below the maximum ground water table, Contractor shall provide adequate weights to prevent floatation of the pipe.

G. Install PVC pipe in accordance with AWWA C605 and AWWA Manual M23. Assemble pipe using the following types of joints:

1. Gasketed bell joint – integral with pipe
2. Restrained mechanical joint
3. Restrained joint

H. Assemble push-on joints in accordance with the pipe manufacturer’s recommendations. Assemble mechanical joints in accordance with the fitting and restrain manufacturer’s recommendations.

I. Do not remove factory installed gaskets. Keep joints free of dirt, sand, grit, grease, or any foreign material. Apply NSF certified lubricant when assembling gasketed joints in accordance with the pipe manufacturer’s requirements.

J. Pipe alignment is essential for proper joint assembly. Align the spigot to the bell and insert the spigot into the bell until it contacts the gasket uniformly in accordance with the

manufacturer's markings. Do not swing or "stab" the joint; that is, do not suspend the pipe and swing it into the bell.

K. Protect pipe from damage when assembling push-on pipe joints. Wood or other suitable (non-metallic) material consistent with the pipe manufacturer's recommendations shall be used as a cushion while pushing home the pipe. Avoid metal to plastic contact.

L. The manufacturer's allowable pipe deflection shall be used to maintain the minimum 18" vertical and 10' horizontal separation required from all existing and proposed sanitary and storm sewers and structure. The fittings shown on the construction plans are the minimum necessary to maintain a horizontal route complying with the horizontal separation requirements. Additional ductile iron (DI) mechanical joint (MJ) fittings may be required in the field to maintain the minimum 18" vertical separation from existing and proposed sanitary and storm sewers.

M. Install all ductile iron (DI) mechanical joints (MJ), restraints, fittings, gate valves, insertion valves, and tapping sleeves in accordance with the manufacturer's recommendations. All gate and insertion valves shall be set on crushed stone and concrete pads so the distribution pipe does not bear the weight of the valve assembly.

N. All pipes which settle, or which are not in alignment, shall be taken up and re-laid at the Contractor's expense.

O. Backfilling: Pipe bedding and backfill shall be placed as shown in the plans. Contractor shall install initial backfill consisting of Class I material such as #8 aggregate a minimum of 12" above the top of PVC pipe. Contractor shall hand tamp or walk-in bedding and initial backfill. Contractor shall install Class II or clean sand granular backfill in 6-inch maximum lifts and mechanical compact to 95% modified proctor density when trenches are within 5 feet of sidewalks, pavement, curbs, or buildings. Compaction operations shall be completed taking care not to disturb the pipe.

3.4 SERVICE TAP AND WATER METER INSTALLATION

A. Contractor shall coordinate with the Town of Whiteland Department of Public Works for the Town furnished water meter and inspection of the service tap. Contractor shall be responsible for providing sufficient notification of the tap inspection and lead time to the Town for ordering of the new meter.

1. Contractor shall verify the water meter and service line sizes with the Town of Whiteland and MEP engineer prior to construction.

B. Contractor shall install all components associated with the water meter including but not limited to the meter, backflow preventor, meter setting, pit, and meter valves in accordance with the Town of Whiteland Constructions Standards and Specifications.

3.5 DEWATERING

A. If necessary due to site conditions or excessive rainfall events, the Contractor shall dewater the site and/or excavations utilizing a system of pumps and re-useable

dewatering bags. The Contractor shall not allow dewatering operations to discharge directly into storm sewers, storm inlets or manholes, ditches, or swales without an appropriately sized and selected dewatering bag. Under no circumstances shall dewatering operations associated with groundwater or precipitation be discharged into a sanitary sewer.

3.6 FIELD QUALITY CONTROL

A. Contractor shall provide red line, record drawings of PVC conduit for domestic water service lateral to the Owner and Engineer within 14 calendar days of installation. Drawings shall document any changes to the location or size of the system components.

END OF SECTION 33 1417

SECTION 33 4200 – STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. INDOT 2022 Standard Specifications – Sections 702, 715, 718 and 720.

1.2 SUMMARY

A. Section Includes:

1. Installation of storm sewer pipes.

2. Installation of storm inlets, storm manholes, stormwater quality treatment units, water quality diversion structures, detention system outlet structures, pipe end sections, concrete headwalls, and trash/animal guards.

1.3 ACTION SUBMITTALS

A. Product Certificates: Contractor shall submit the following certifications and documentation:

1. Producer name, location and source/approval number of the precast reinforced concrete pipe, pipe end section, riser rings and storm structures from the INDOT Certified Precast Concrete Producers list.

2. Manufacturer name, location and source/approval number of the HDPE pipe, PVC pipe and all plastic fittings from the INDOT plastic pipe and pipe liner sources list.

B. Product Data: For each type of product.

1. Contractor shall submit shop drawings, manufacturer information, details, material descriptions, and dimensions of individual components for the following:

a. Precast concrete storm structures and headwalls
b. Storm sewer castings
c. Nyloplast Drain Basins
d. Aqua-Swirl hydrodynamic separators
e. CheckMate UltraFlex inline check valves
f. Trash & animal guards

2. Contractor shall submit concrete mix designs for Class ‘A’ concrete collars and cast-in-place concrete headwalls.

1.4 PROJECT CONDITIONS

A. The Contractor shall field verify location, size, and elevation of the existing storm sewer system where proposed storm sewer systems are to be connected. Contractor shall report discrepancies to the Owner and Engineer immediately.

B. The Contractor shall field verify the location, size, and elevation of other existing utility conveyances including domestic water, sanitary sewer, natural gas, electric, and telecommunication cables/ducts prior to construction and immediately report conflicts with the proposed storm sewer systems to the Owner and Engineer.

C. Storm sewer pipe and structures shall comply with current specifications of the Town of Whiteland Stormwater Department/Utility and Town of Whiteland Design Standards and Specifications Manual and all other responsible agencies in respect to design and quality of construction.

D. If the Contractor elects to use alternate precast structures, casting manufacturers, or stormwater quality unit makes and models, detailed shop drawings shall be submitted to the Engineer for review and written approval prior to construction. Acceptance of alternates shall be at the discretion of the Owner and Engineer.

E. Storm sewer pipe material substitutions must be approved in writing by the Engineer.

PART 2 - PRODUCTS

2.1 REINFORCED CONCRETE PIPE (RCP)

A. Where reinforced concrete pipe (RCP) is shown on the construction plans, it shall be Class III, IV, or V (refer to plans), Wall "B" conforming to ASTM C76, AASHTO M170, and the Indiana Department of Transportation (INDOT) Standard Specifications Section 907.

1. Provide RCP with tongue and groove joints with compression type rubber gasket which conforms to ASTM C443.

2.2 HIGH-DENSITY POLYETHYLENE (HDPE) PIPE

A. Where high-density polyethylene (HDPE) pipe is shown on the construction plans, it shall be dual wall corrugated HDPE pipe and fittings consisting of an annular outer corrugate pipe wall and a smooth inner wall in accordance with ASTM F2648 and the Indiana Department of Transportation (INDOT) Standard Specifications Section 907.

1. Pipe and fitting materials shall be, in accordance with ASTM D3350, either virgin high-density polyethylene or engineering compound of virgin and recycled high density polyethylene with a minimum cell class of 435420C.

2. Furnish HDPE pipe with bell and spigot joints in conformance with ASTM F2648.

3. Gasket material shall conform to ASTM F477.

4. Provide fittings of the same manufacturer for each type of HDPE pipe. Manufactured fittings shall not be accepted substitutes for precast storm structures.

2.3 POLYVINYL CHLORIDE (PVC) PIPE

A. Where polyvinyl chloride (PVC) pipe is shown on the construction plans, it shall be solid wall gravity flow PVC storm sewer pipe and fittings with bell and spigot joints with elastomeric seals and smooth inner walls in accordance with ASTM D3034 (SDR 35, 12 to 15-inch diameter), ASTM F679 (PS 46, 18 to 36-inch diameter), and INDOT Standard Specification Section 907.

1. Minimum cell class shall be in accordance with ASTM D1784 as follows:

   a. Cell class 12364 for 12 to 15-inch diameter pipes.

   b. Cell class 12454 for 18 to 24-inch diameter pipes.

2. Pipe shall have a minimum stiffness of 46 pounds per square inch when tested in accordance with ASTM D2412.

3. Furnish PVC pipe with flexible, gasketed compression type joints so that, when assembled, the gasket inside the bell is compressed radially on the pipe spigot to form a soil-tight seal. Assemble joints in accordance with the pipe manufacturer's recommendations and ASTM D3212. Gaskets shall conform to ASTM F477.

4. Manufactured fittings shall not be accepted substitutes for precast storm structures.

2.4 POLYPROPYLENE (PP) PIPE

A. Where polypropylene (PP) pipe is shown on the construction plans, it shall be double wall PP pipe with a smooth interior and annular exterior corrugations in accordance with ASTM F2736.

1. Polypropylene compound for pipe and fitting production shall be impact modified copolymer meeting the material requirements of ASTM F2736 Section 4, ASTM F2881 Section 5, and AASHTO M330 Section 6.1 for respective diameters.

2. Provide pipe joined with a gasketed integral bell and spigot joint meeting the requirements of ASTM F2736. Joints shall be watertight.

2.5 SLOTTED DRAIN PIPE

A. Slotted drain pipe shall consist of the Duraslot slotted drain pipe system as manufactured by Advanced Drainage Solutions (ADS) Inc.

B. Duraslot system shall utilize a variable height riser and pedestrian grate.

2.6 PRECAST CONCRETE STORM STRUCTURES

A. All storm manholes, catch basins, and inlets shall be precast concrete.

B. Precast concrete and steel for manholes and inlets shall be in accordance with ASTM C-478.

C. Castings shall be as shown on the detail sheet(s) for manufacturer, type, and model numbers.

D. Weir plates and angle iron connectors for outlet control and/or diversion structures shall be galvanized steel of the thickness as specified on the plans. Bolts utilized for connecting the angle iron to the precast structure shall be galvanized steel of sufficient length to attach angle iron to the structure. The weir plates shall extend the full inside width or diameter of the precast storm structure to which it connects. The weir plate heights shall be as shown on the construction plans.

E. Debris screens/trash guards, for outlet control structure orifices, shall be galvanized steel. Each screen shall extend beyond the orifice opening by a minimum of 2 inches on any and all sides.

2.7 NYLOPLAST DRAIN BASINS

A. Nyloplast drain basins, grates, and covers shall be as manufactured by Advanced Drainage Solutions (ADS).

2.8 STORMWATER QUALITY TREATMENT UNITS

A. Aqua-Swirl hydrodynamic separators as manufactured by Aqua-Shield, Inc. shall be installed for stormwater quality treatment as indicated on the construction plans. No substitutions will be allowed without prior written approval by the Engineer.

B. Units shall be handled and stored in accordance with the manufacturer’s specifications to avoid damage.

C. Aqua-Swirl units shall be fabricated from polymer pre-coated steel sheet for corrugated steel pipe and shall comply with ASTM A 760 and ASTM A 742. Units must be installed in offline configurations as shown on the plans.

1. Stub outs and internal components shall be supplied by the manufacturer and MIG welded using accepted welding practices.

2. The manufacturer shall supply direct access to the unit via a riser. The riser shall not be field cut by the contractor.

D. Pipe coupling connections to and from Aqua-Swirl shall be Mar-Mac, Fernco, or Mission style flexible boot with stainless steel tension bands and shear guard. Fabricated HDPE

bends shall be installed as noted on the plans between the hydrodynamic separators and diversion manholes.

E. Bedding Stone: Stable base consisting of at least 6 inches of fine, readily compacted soil or granular fill material. Bedding shall not contain stones retained on a 3-inch ring, frozen lumps, highly plastic clay, organic material, corrosive material, or other deleterious foreign materials.

F. Backfill Stone: Class I or II stone materials, (well graded gravels, gravely sands; contains little or no fines) as defined by ASTM D 2321, Section 5, Materials.

G. Contractor shall install the hydrodynamic separators in accordance with the manufacturer's specifications and details including all traffic rated, reinforced concrete pads around castings for units located in areas subject to traffic loading.

2.9 INLINE CHECK VALVE

A. Inline check valves shall be CheckMate UltraFlex inline check valves as manufactured by Tideflex Technologies.

B. Inline check valves shall be handled, stored, and installed in accordance with the manufacturer's specifications to avoid damage.

2.10 MORTAR

A. Mortar for setting casting frames shall be composed of 1 part cement to 2 parts No. 23 fine aggregate by volume.

2.11 TRASH & ANIMAL GUARDS

A. Trash guard for pipe end sections shall be standard trash guards as manufactured by Haala Industries, Inc. or an approved equal.

1. Trash guards shall consist of solid, galvanized steel bars and shall be mounted to the pipe end sections using hinged connections.

B. Side mounted debris and animal guards for detention outlet control structures shall be angle grates, inlet grates, raised plate grates, or triangle grates as manufactured by Haala Industries, Inc or an approved equal.

1. Side mounted debris and animal guards shall consist of galvanized steel plates or bars with mounting flanges for connections for the precast concrete structure wall.

C. Trash and animal guards shall be handled, stored, and installed in accordance with the manufacturer's specifications to avoid damage.

2.12 CONCRETE HEADWALLS

A. Where concrete headwalls are shown on the construction plans, they shall conform to the Kentucky Department of Highways Standard Drawing No. RDH-020-03 “Slope & Flared Headwalls for 12” to 27” Pipe” in accordance with the Johnson County Surveyor’s Office requirements.

1. Concrete headwalls and toe walls may be precast or cast-in-place concrete.

PART 3 - EXECUTION

3.1 GENERAL

A. Permits and Codes: The intent of this section of the specifications is that the Contractor's bid on the work covered herein shall be based upon the drawings and specifications but that the work shall comply with all applicable codes and regulations as amended by any waivers. The contractor shall furnish all bonds necessary to get permits for cuts and connections to existing sewers.

B. Contractor shall be responsible for confirming, coordinating, and scheduling all necessary inspections by the Town of Whiteland related to the storm sewer system installation.

C. Local Standards: The term "local standards" as used herein means the standards of design and construction of the Town of Whiteland Stormwater Department/Utility and Town of Whiteland Design Standards and Specifications Manual.

D. Existing Improvements: The Contractor shall maintain in operating condition all active utilities, sewers, and other drains encountered in the sewer installation. The Contractor shall repair to the satisfaction of the Owner any damage to existing active improvements.

E. Utilities: It shall be the responsibility of the Contractor to verity all existing utilities and conditions pertaining to his work. It shall also be the Contractor's responsibility to contact the owners of the various utilities before work is started. The Contractor shall notify in writing the Owner and Engineer of any changes, errors, or omissions found on these plans or in the field before work is started or resumed.

F. Workmanship: This work shall conform to all local, state, and national codes and to be approved by all local and state agencies having jurisdiction.

3.2 TRENCH EXCAVATION

A. Excavate storm sewer trenches to the widths and depths as indicated on the construction plans and details and in accordance Section 31 20 00 Earthwork.

3.3 STRUCTURE INSTALLATION

A. Contractor shall install precast concrete storm structures in accordance with Section 720 of the INDOT 2020 Standard Specifications.

B. Contractor shall install and backfill Nyloplast drain basins and Duraslot slotted drain pipe in accordance with the manufacturer's details, specifications, and recommendations.

C. Excavation shall be to the established bottom of the structure foundations and shall result in a firm, smooth surface. If soft or yielding spots are encountered at this elevation, the Contractor shall remove the soft soil and backfill it with suitable granular backfill or crushed limestone aggregate materials tamped into place. If rock is encountered at the bottom elevation, the excavation shall be carried down 6 inches further and backfilled with an approved material tamped to the required elevation.

D. Inlet and outlet pipes shall extend through structure walls a sufficient distance to allow for connections to the outside and concrete/mortar carefully placed around them to prevent leakage around the pipe.

E. Frames for castings and bearing plates for manholes shall be set in full mortar beds and secured. Mortar shall be composed of 1 part cement to 2 parts No. 23 fine aggregate by volume. Castings shall be set to the finished pavement elevations so that subsequent adjustments are not necessary.

F. Where castings are adjacent to or are surrounded by cement concrete construction, each casting shall be entirely separated from the concrete by a preformed joint filler not less than 3/8" thick. Grates shall be places with the maximum dimension of the rectangular opening parallel to the direction of flow.

G. If a manhole is constructed within the pavement area, the total height of the casting specified plus the height of the adjusting rings shall be based on the adjacent pavement section depth.

H. If the completed structure is partially or completely under or at its nearest point is within 5 feet of pavement, sidewalks, curbs, gutters or buildings, the excavated space not occupied by the structure shall be backfilled with granular backfill material.

I. Backfilling Aqua-Swirl Units: contractor shall backfill unit in accordance with ASTM A 798, Section 10, Structural Backfill Placement. The backfill stone shall be placed in 6 to 12 inch lifts and compacted to 90% proctor density. The backfill shall extend at least 18 inches outward from the unit and for the full height of the unit (including risers) extending laterally to undisturbed soils.

J. Manhole Inverts: construct manhole flow channels of concrete sewer pipe or brick, smoothly finished and of semicircular section conforming to the inside diameter of the connecting sewers. Make changes in size or grade gradually and changes indirection by true curves. Provide such channels for all connecting sewers at each manhole.

K. The Contractor shall install galvanized steel weir plates at the elevations as shown on the plans. Weir plates for outlet control structures shall be attached to the precast

structure utilizing galvanized steel angle iron connectors and bolts. Weir plates for diversion structures shall be attached to precast structure utilizing waterproof epoxy.

3.4 PIPE INSTALLATIONS

A. Contractor shall install storm sewer pipe and underdrains in accordance with Sections 715 and 718 of the INDOT 2020 Standard Specifications.

B. Excavate trenches in accordance with the details included in the construction plans and Section 31 20 00 Earthwork. Where pipe is to be place in fill sections, a portion of the fill shall be constructed and compacted in accordance with the specifications prior to pipe installation.

C. Sheet and brace trenches as necessary to protect workmen and adjacent structures. All trenching to comply with current Occupational Safety and Health Administration (OSHA) standards. Keep trenches free from water while construction is in progress. Under no circumstances shall pipe or appurtenances be laid in standing water. Conduct the discharge from trench de-watering to appropriately designed and sized dewatering bags or basins prior to discharging into storm sewer drains or natural drainage channels.

D. Install #8 compacted aggregate for bedding of flexible pipe in 6-inch lifts. Compaction shall be accomplished by hand or mechanical tamping or walking the granular material in.

E. Lay pipe to the lines and grades shown on the construction plans. All pipe shall be laid commencing from the lowest point, proceeding upstream, with the spigot ends pointing towards the direction of the flow. HDPE and PVC pipe shall not be blocked for support. The practice of blocking pipe up to grade with bedding material then backfilling underneath the pipe is prohibited. The entire length of the bed section shall be at the proper grade before installing pipe.

F. Where HDPE and PVC pipe are to be installed below the maximum ground water table, Contractor shall provide adequate weights to prevent floatation of the pipe.

G. Install HDPE and PVC pipe on a firm, uniform foundation of bedding material under the entire lower quadrant of the barrel. No weight shall be supported by the pipe bell.

H. Install reinforced concrete pipe on a firm, uniform foundation of undisturbed soil and cut recesses into the soil to receive any projecting hubs or bells.

I. Pipe shall be carefully inserted into the bell in such that there will be no unevenness of any kind along the bottom half of the pipes and that there is a uniform joint space all around.

J. Contractor shall take special precautions when homing PVC pipe as to not over-seat past the home marks. Field cut pipes shall have the homing marks reestablished to ensure proper seating depths. Field cut pipes shall have the cut ends re-tapered, by grinding or filing, as close as possible, to the original taper provided by the manufacturer. When homing pipe with a spud-bar or other mechanical equipment, other than by hand,

a piece of wood shall be placed between the pipe and tool to prevent damage to the bell end section.

K. All pipes which settle, or which are not in alignment, shall be taken up and re-laid at the Contractor's expense.

L. All storm sewer pipe, except underdrains, shall be video inspected for acceptance a minimum of 30 days after the completion of backfill operations.

M. Backfilling: Pipe bedding and backfill shall be placed as shown in the plans. Contractor shall install initial backfill consisting of Class I material such as #8 aggregate a minimum of 12" above the top of flexible pipe (PVC, HDPE, and PP pipe). Contractor shall hand tamp or walk-in bedding and initial backfill. Contractor shall install Class II or clean sand granular backfill in 6-inch maximum lifts and mechanical compact to 95% modified proctor density when trenches are within 5 feet of sidewalks, pavement, curbs, or buildings. Compaction operations shall be completed taking care not to disturb the pipe.

3.5 INLINE CHECK VALVE INSTALLATION

A. Contractor shall install the inline check valve in accordance with the manufacturer's specifications.

3.6 DEWATERING

A. If necessary due to site conditions or excessive rainfall events, the Contractor shall dewater the site and/or excavations utilizing a system of pumps and re-useable dewatering bags. The Contractor shall not allow dewatering operations to discharge directly into storm sewers, storm inlets or manholes, ditches, or swales without an appropriately sized and selected dewatering bag. Under no circumstances shall dewatering operations associated with groundwater or precipitation be discharged into a sanitary sewer.

3.7 FIELD QUALITY CONTROL

A. Deflection Testing for Flexible (HDPE, PP, PVC) Pipes: Contractor shall be responsible for performing deflection testing in accordance with the following requirements:

1. Performing testing in presence of the Owner's designated representative.

2. Perform testing on all flexible pipes 12-inch diameter and larger after the final backfill has been in place for at least 30 days.

3. Perform deflection testing using a mandrel pulled by hand. The mandrel (go/no-go) devise shall be cylindrical in shape and constructed with nine or ten evenly spaced arms or prongs.

4. No pipe shall exceed a vertical deflection of 5%. Contractor shall uncover, replace, and retest any pipe not passing the deflection test until a satisfactory result is achieved.

B. Television Inspection: Contractor shall be responsible for televising the storm sewer in accordance with the following requirements:

1. Televise all mainline storm sewers (manhole to manhole).

2. Televise all lateral storm sewers (manhole to inlet, inlet to inlet, etc.) exceeding 40 feet in length.

3. Perform television inspection in the presence of the Owner's designated representative.

4. Clean all new storm sewers prior to television inspection so the image is clear and interior condition of the pipe is easily evaluated.

5. Correct all unacceptable conditions found during television inspection and re-televise until no unacceptable conditions are found.

6. Unacceptable conditions are those adversely impacting the ability of the system to function as designed or to be properly maintained including but not limited to the following:

a. Protruding taps

b. Cracked or faulty pipe

c. Misaligned or deformed pipe

d. Debris in line

e. Infiltration/exfiltration

f. Excessive gaps in joints

g. Bellies or sags with a depth greater than or equal to 10% of the pipe diameter (maximum of 3 inches) or a length greater than 25 feet.

7. Submit copy of the televising recording (DVD format) to the Owner within 14 calendar days of the inspection.

JOHNSON CO. LEGAL DRAIN NOTES

- NO STRUCTURES, OR IMPROVEMENTS SHALL BE PERMITTED WITHIN THE LEGAL DRAIN EASEMENT. ALL UTILITIES, BUILDINGS, STRUCTURES, PLANTINGS, CROPS, TREES, SHRUBS, AND WOODY VEGETATION GROWN WITHIN THE EASEMENT, OR ALONG THE LEGAL DRAIN ARE AT THE RISK OF OWNER AND SUBJECT TO REMOVAL WITH MINIMAL NOTICE, WITHOUT RESTITUTION, AND SUBJECT TO SPECIAL ASSESSMENT (IC 36-9-27-33).
- THIS SITE PLOTS BY SCALE AS BEING WITHIN A REGULATED WATERSHED. ANY AND ALL SITE IMPROVEMENTS WITHIN A REGULATED WATERSHED ARE SUBJECT TO REVIEW BY THE JOHNSON COUNTY DRAINAGE BOARD. ALL TRACTS WITHIN A REGULATED DRAIN WATERSHED ARE SUBJECT TO ASSESSMENTS FOR MAINTENANCE (IC 36-9- 27-44), AND WHEN PRACTICABLE, RECONSTRUCTION (IC 36-9-27-51).
- NO CONSTRUCTION, OR IMPROVEMENTS SHALL IMPAIR OR NEGATIVELY IMPACT ANY PRIVATE DRAIN TILE (IC 36-9-27-2) KNOWN OR UNKNOWN. NO CONSTRUCTION, OR IMPROVEMENTS SHALL IMPAIR, IMPEDE, OR NEGATIVELY IMPACT, A NATURAL SURFACE WATERCOURSE (IC 36-9-27.4-3). WHEN ENCOUNTERED SAID TILE OR WATERCOURSE WILL BE DESIGNED, AND RE-ROUTED SO NOT TO IMPEDE, IMPAIR, OR NEGATIVELY IMPACT SURFACE OR SUBSURFACE WATER FLOW.
- PRIVATE TILES, AND MUTUAL DRAIN CONNECTIONS TO REGULATED DRAIN (IC 36-27-9-17). ALL CONNECTIONS, OR OUT-LETS INTO A REGULATED DRAIN ARE SUBJECT TO APPROVAL BY THE COUNTY SURVEYOR (≤ 10"), OR THE JOHNSON COUNTY DRAINAGE BOARD (> 11"). APPLICATIONS ARE AVAILABLE IN THE COUNTY SURVEYOR'S OFFICE AND SHOULD INCLUDE ALL MAPS, PLANS, SPECIFICATIONS, BONDING, EASEMENT VERBIAGE, APPLICATION FEES AND OWNERS STATEMENT OF WATER QUALITY (IC 36-27-9-23), PRIOR TO APPROVAL.

NOTE: The underground utilities shown have been located from field survey information and existing drawings. The surveyor makes no guarantees that the underground utilities comprise all such utilities in the area, either in–service or abandoned. The surveyor further does not warrant that the underground utilities shown are in the exact location indicated although the surveyor does certify that they are located as accurately as possible from information available. The surveyor has not physically located the underground utilities.

UTILITIES NOTES

1. CONTRACTOR SHALL BE RESPONSIBLE FOR MAINTAINING TRAFFIC AND PROVIDING ALL NECESSARY FLAGMAN, BARRELS, SIGNAGE, ETC. DURING CONSTRUCTION. ALL APPLICABLE M.U.T.C.D. STANDARDS SHALL GOVERN THIS WORK.
2. CONTRACTOR SHALL REFER TO THE ELECTRICAL SITE PLAN PREPARED BY PRIMARY ENGINEERING, INC. FOR PARKING LOT LIGHTING AND SPECIFICATIONS.
3. ALL STORM SEWER CASTINGS SHALL BE NPDES PHASE II COMPLIANT. CASTINGS SHALL BE MANUFACTURED WITH A STATEMENT SAYING: "DUMP NO WASTE, DRAINS TO RIVER" IN ½" RAISED LETTERS.
4. ALL FIELD TILES DISTURBED DURING CONSTRUCTION MUST BE REPAIRED/CONNECTED TO NEW STORMWATER FACILITIES.
5. EXISTING UTILITY SIZE AND MATERIAL INFORMATION SHOWN ON THESE PLANS ARE PER THE BEST GRAPHICAL AND VISIBLE INFORMATION AVAILABLE. CONFLICTS MAY EXIST AND IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO FIELD VERIFY ALL SIZING AND MATERIAL INFORMATION PROVIDED. IF ACTUAL CONDITIONS DIFFER FROM THAT INFORMATION SHOWN ON THE PLANS, THE CONTRACTOR SHALL, PRIOR TO THE INSTALLATION OF ANY PROPOSED INFRASTRUCTURE, NOTIFY THE DESIGN ENGINEER IMMEDIATELY.

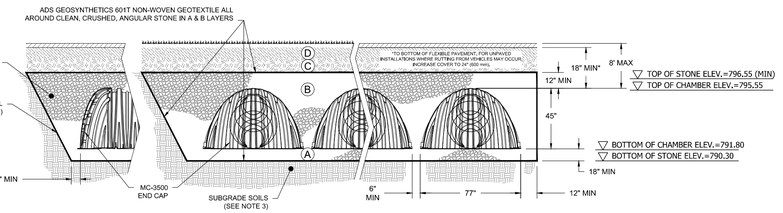
PHASE 2A-NORTH U/G AND SOUTH DRY BASINS

ACCEPTABLE FILL MATERIALS: STORMTECH MC-3500 CHAMBER SYSTEMS

	MATERIAL LOCATION	DESCRIPTION	AASHTO MATERIAL CLASSIFICATIONS	COMPACTION / DENSITY REQUIREMENT
D	**FINAL FILL:** FILL MATERIAL FOR LAYER 'D' STARTS FROM THE TOP OF THE 'C' LAYER TO THE BOTTOM OF FLEXIBLE PAVEMENT OR UNPAVED FINISHED GRADE ABOVE. NOTE THAT PAVEMENT SUBBASE MAY BE PART OF THE 'D' LAYER	ANY SOIL/ROCK MATERIALS, NATIVE SOILS, OR PER ENGINEER'S PLANS, CHECK PLANS FOR PAVEMENT SUBGRADE REQUIREMENTS.	N/A	PREPARE PER SITE DESIGN ENGINEER'S PLANS, PAVED INSTALLATIONS MAY HAVE STRINGENT MATERIAL AND PREPARATION REQUIREMENTS.
C	**INITIAL FILL:** FILL MATERIAL FOR LAYER 'C' STARTS FROM THE TOP OF THE EMBEDMENT STONE (9" LAYER) TO 24" (600 mm) ABOVE THE TOP OF THE CHAMBER. NOTE THAT PAVEMENT SUBBASE MAY BE A PART OF THE 'C' LAYER.	GRANULAR WELL-GRADED SOIL/AGGREGATE MIXTURES, <35% FINES OR PROCESSED AGGREGATE. MOST PAVEMENT SUBBASE MATERIALS CAN BE USED IN LIEU OF THIS LAYER.	AASHTO M145[1] A-1, A-2-4, A-3 OR AASHTO M43[1] 3, 357, 4, 467, 5, 56, 57, 6, 67, 68, 7, 78, 8, 89, 9, 10	BEGIN COMPACTIONS AFTER 24" (600 mm) OF MATERIAL OVER THE CHAMBERS IS REACHED. COMPACT ADDITIONAL LAYERS IN 12" (300 mm) MAX LIFTS TO A MIN. 95% PROCTOR DENSITY FOR WELL GRADED MATERIAL AND 95% RELATIVE DENSITY FOR PROCESSED AGGREGATE MATERIALS.
B	**EMBEDMENT STONE:** FILL SURROUNDING THE CHAMBERS FROM THE FOUNDATION STONE (A' LAYER) TO THE 'C' LAYER ABOVE.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[1] 3, 4	NO COMPACTION REQUIRED.
A	**FOUNDATION STONE:** FILL BELOW CHAMBERS FROM THE SUBGRADE UP TO THE FOOT (BOTTOM) OF THE CHAMBER.	CLEAN, CRUSHED, ANGULAR STONE	AASHTO M43[1] 3, 4	PLATE COMPACT OR ROLL TO ACHIEVE A FLAT SURFACE.[2,3]

PLEASE NOTE:
1. THE LISTED AASHTO DESIGNATIONS ARE FOR GRADATIONS ONLY. THE STONE MUST ALSO BE CLEAN, CRUSHED, ANGULAR. FOR EXAMPLE, A SPECIFICATION FOR #4 STONE WOULD STATE: "CLEAN, CRUSHED, ANGULAR NO. 4 (AASHTO M43) STONE".
2. STORMTECH COMPACTION REQUIREMENTS ARE MET FOR 'A' LOCATION MATERIALS WHEN PLACED AND COMPACTED IN 9" (230 mm) (MAX) LIFTS USING TWO FULL COVERAGES WITH A VIBRATORY COMPACTOR.
3. WHERE INFILTRATION SURFACES MAY BE COMPROMISED BY COMPACTION, FOR STANDARD DESIGN LOAD CONDITIONS, A FLAT SURFACE MAY BE ACHIEVED BY RAKING OR DRAGGING WITHOUT COMPACTION EQUIPMENT. FOR SPECIAL LOAD DESIGNS, CONTACT STORMTECH FOR COMPACTION REQUIREMENTS.
4. ONCE LAYER 'C' IS PLACED, ANY SOIL/MATERIAL CAN BE PLACED IN LAYER 'D' UP TO THE FINISHED GRADE. MOST PAVEMENT SUBBASE SOILS CAN BE USED TO REPLACE THE MATERIAL REQUIREMENTS OF LAYER 'C' OR 'D' AT THE SITE DESIGN ENGINEER'S DISCRETION.



NOTES:

1. CHAMBERS SHALL MEET THE REQUIREMENTS OF ASTM F2418, "STANDARD SPECIFICATION FOR POLYPROPYLENE (PP) CORRUGATED WALL STORMWATER COLLECTION CHAMBERS" CHAMBER CLASSIFICATION 45x76 DESIGNATION SS.
2. MC-3500 CHAMBERS SHALL BE DESIGNED IN ACCORDANCE WITH ASTM F2787 "STANDARD PRACTICE FOR STRUCTURAL DESIGN OF THERMOPLASTIC CORRUGATED WALL STORMWATER COLLECTION CHAMBERS".
3. THE SITE DESIGN ENGINEER IS RESPONSIBLE FOR ASSESSING THE BEARING RESISTANCE (ALLOWABLE BEARING CAPACITY) OF THE SUBGRADE SOILS AND THE DEPTH OF FOUNDATION STONE WITH CONSIDERATION FOR THE RANGE OF EXPECTED SOIL MOISTURE CONDITIONS.
4. PERIMETER STONE MUST BE EXTENDED HORIZONTALLY TO THE EXCAVATION WALL FOR BOTH VERTICAL AND SLOPED EXCAVATION WALLS.
5. REQUIREMENTS FOR HANDLING AND INSTALLATION:
   - TO MAINTAIN THE WIDTH OF CHAMBERS DURING SHIPPING AND HANDLING, CHAMBERS SHALL HAVE INTEGRAL, INTERLOCKING STACKING LUGS.
   - TO ENSURE A SECURE JOINT DURING INSTALLATION AND BACKFILL, THE HEIGHT OF THE CHAMBER JOINT SHALL NOT BE LESS THAN 3".
   - TO ENSURE THE INTEGRITY OF THE ARCH SHAPE DURING INSTALLATION, a) THE ARCH STIFFNESS CONSTANT AS DEFINED IN SECTION 6.2.8 OF ASTM F2418 SHALL BE GREATER THAN OR EQUAL TO 500 LBS/FT²/%, AND b) TO RESIST CHAMBER DEFORMATION DURING INSTALLATION AT ELEVATED TEMPERATURES (ABOVE 73° F / 23° C), CHAMBERS SHALL BE PRODUCED FROM REFLECTIVE GOLD OR YELLOW COLORS.

PLOT DATE/TIME

LAYOUT NOTES

1. Dimensions are shown to Face of Curb unless otherwise noted.
2. Contractor shall coordinate final joint locations in the field with the Landscape Architect. Align to existing conditions when practical, including at building and wall corners, connections to existing work, and to centerlines of doors.
3. Space control joints evenly between all bands and expansion joints as shown, unless otherwise dimensioned. Space interim joints equally whenever possible.
4. Digital AutoCAD files will be provided to the successful bidder as a courtesy to assist with field layout. The Contractor maintains all responsibility for the use, accuracy, and confirmation of such data.
5. All pavement striping shown shall adhere to Specifications. The Contractor shall include in their bid any miscellaneous copy, striping, or curb painting that may be requested by the Fire Marshal.
6. All disturbed areas not proposed to receive pavements shall be dressed with topsoil and seeded per Specifications.
7. Contractor shall provide and install One (1) Accessible Parking Sign per accessible parking space indicated in plans. Coordinate final location in the field with Landscape Architect.

PLAN NOTES

1. REMOVE LIGHT, POLE, CONCRETE BASE, CONDUCTORS AND CONDUIT BACK TO POINT INDICATED.
2. CONDUCTORS TO BE REMOVED BACK TO CONTACTOR/PANEL. CONDUIT ROUTED BELOW GRADE INTO BUILDING SHALL REMAIN AND BE EXTENDED TO NEW IN-GROUND PULL BOX.
3. DISCONNECT AND REMOVE RECEPTACLE IN BAND TOWER BACK TO SOURCE.
4. DISCONNECT AND REMOVE CONTACTOR. EXISTING CONTROL CABLING AND BRANCH CIRCUITRY SHALL REMAIN TO BE RECONNECT TO NEW CONTACTOR.
5. UTILITY COMPANY TO REMOVE UTILITY TRANSFORMER. CONTRACTOR SHALL REMOVE PRIMARY CABLING AND CONDUIT BACK TO POLE LINE NORTH OF SCHOOL. COORDINATE WITH LOCAL UTILITY.
6. DISCONNECT AND REMOVE ELECTRICAL TO DUGOUTS AND ASSOCIATED SCOREBOARD. REMOVE CONDUCTORS, CONDUIT AND CABLING BACK TO SOURCE.

EXTERIOR LIGHT FIXTURE SCHEDULE - PHASE 2A

TAG	MANUFACTURER'S CATALOG NUMBER	MAX. WATTS	MOUNT	MIN. LUMEN OUTPUT *(D/I)	CCT	CRI	DESCRIPTION	REMARKS
SL1	STREETWORKS #VERD-M-CA3-160-740-HV-T4-A15-XX-MS/DIM-L40 WITH #SSA4T30W-XX-1-FGV	163	POLE	24,394	4000	70	480V, DIE CAST ALUMINUM FIXTURE WITH TYPE IV. POLE MOUNT ARM. MOTION SENSOR WITH STAND-ALONE PASSIVE INFRARED MOTION SENSING. SENOR SHALL HAVE CAPABILITIES TO BE PROGRAMMED THROUGH HAND HELD DEVICE USING INFRARED. POLE SHALL BE 30'-0 TALL, 4" SQUARE ALUMINUM POLE WITH SINGLE HEAD MOUNTING, VIBRATION PAD, GROUND LUG AND VIBRATION DAMPENER	1,2
SL1-HS	STREETWORKS #VERD-M-CA3-160-740-HV-T4-A15-XX-HSS-MS/DIM-L40 WITH #SSA4T30W-XX-1-FGV	163	POLE	24,394	4000	70	480V, DIE CAST ALUMINUM FIXTURE WITH TYPE IV. POLE MOUNT ARM AND HOUSE SIDE SHIELD MOTION SENSOR WITH STAND-ALONE PASSIVE INFRARED MOTION SENSING. SENOR SHALL HAVE CAPABILITIES TO BE PROGRAMMED THROUGH HAND HELD DEVICE USING INFRARED. POLE SHALL BE 30'-0 TALL, 4" SQUARE ALUMINUM POLE WITH SINGLE HEAD MOUNTING, VIBRATION PAD, GROUND LUG AND VIBRATION DAMPENER	1,3
SL2	STREETWORKS #VERD-M-CA3-160-740-HV-T5-A15-XX-MS/DIM-L40 WITH #SSA4T30W-XX-1-FGV	163	POLE	24,011	4000	70	480V, SINGLE HEAD DIE CAST ALUMINUM FIXTURE WITH TYPE V. POLE MOUNT ARM. MOTION SENSOR WITH STAND-ALONE PASSIVE INFRARED MOTION SENSING. SENOR SHALL HAVE CAPABILITIES TO BE PROGRAMMED THROUGH HAND HELD DEVICE USING INFRARED. POLE SHALL BE 30'-0 TALL, 4" SQUARE ALUMINUM POLE WITH SINGLE HEAD MOUNTING, VIBRATION PAD, GROUND LUG AND VIBRATION DAMPENER.	1,2
SL2-2	STREETWORKS #VERD-M-CA3-160-740-HV-T5-A15-XX-MS/DIM-L40 WITH #SSA4T30W-XX-1-FGV	326	POLE	48,022	4000	70	480V, DUAL HEAD DIE CAST ALUMINUM FIXTURE WITH TYPE V. POLE MOUNT ARM. MOTION SENSOR WITH STAND-ALONE PASSIVE INFRARED MOTION SENSING. SENOR SHALL HAVE CAPABILITIES TO BE PROGRAMMED THROUGH HAND HELD DEVICE USING INFRARED. POLE SHALL BE 30'-0 TALL, 4" SQUARE ALUMINUM POLE WITH 2 AT 180 DEGREE HEAD MOUNTING, VIBRATION PAD, GROUND LUG AND VIBRATION DAMPENER.	1,5
SL2-4	STREETWORKS #VERD-M-CA3-160-740-HV-T5-A15-XX-MS/DIM-L40 WITH #SSA4T30W-XX-1-FGV	652	POLE	96,044	4000	70	**480V, QUAD HEAD DIE CAST ALUMINUM FIXTURE WITH TYPE V. POLE MOUNT ARM. MOTION SENSOR WITH STAND-ALONE PASSIVE INFRARED MOTION SENSING. SENOR SHALL HAVE CAPABILITIES TO BE PROGRAMMED THROUGH HAND HELD DEVICE USING INFRARED. POLE SHALL BE 30'-0 TALL, 4" SQUARE ALUMINUM POLE WITH 4 AT 90 DEGREE HEAD MOUNTING, VIBRATION PAD, GROUND LUG AND VIBRATION DAMPENER.**	1,4

GENERAL REMARKS:

1. PROVIDE TWO (2) WIRELESS CONFIGURATIONS TOOLS TO OWNER AFTER COMPLETION OF PROJECT.
2. FIXTURE SHALL WATTSTOPPER #FSP-211 UTILIZING FSIR-100 CONFIGURATION TOOL.

REMARKS:

1. MOTION SENSOR SHALL BE SET UP WITH HIGH SETTING TO BE 100% AND LOW SETTING TO BE 15% .
2. CONTRACTOR SHALL PROVIDE AN ALLOWANCE OF $3,300.00 FOR FIXTURE AND POLE THIS INCLUDES FREIGHT AND SHIPPING COSTS.
3. CONTRACTOR SHALL PROVIDE AN ALLOWANCE OF $3,385.00 FOR FIXTURE AND POLE THIS INCLUDES FREIGHT AND SHIPPING COSTS.
4. **CONTRACTOR SHALL PROVIDE AN ALLOWANCE OF $6,500.00 FOR FIXTURE AND POLE THIS INCLUDES FREIGHT AND SHIPPING COSTS.**
5. CONTRACTOR SHALL PROVIDE AN ALLOWANCE OF $4,950.00 FOR FIXTURE AND POLE THIS INCLUDES FREIGHT AND SHIPPING COSTS.

PANEL: TBH **MCB:** 400 AMPERE **VOLTAGE** 277/480
MOUNTING TYPE: SURFACE **K.A.I.C.:** 35 **PHASE:** 3
PANEL REMARKS: **FED FROM:** SEE RISER **WIRE:** 4+G
HINGED DOOR WITHIN HINGED COVER, COPPER BUS, 100% RATED NEUTRAL BUS, FEED THROUGH LUGS
PROVIDE 125A/3P SUB-FEED CIRCUIT BREAKER. NEMA 3R, SERVICE ENTRNACE RATED.
