QUESTIONS

Q1: Detail 1/S602 requires joist reinforcement for the full length of the Joist for existing Joists in Unit E. We have not been provided with Unit E framing plans and cannot determine with accuracy the length of the existing joists that require reinforcement. By looking at S103L, we could guess that the existing joist length is ~34'-8" long and that they frame into a column line somewhere North of Line 12, but we don't know if all of those joists across Units L, K & J frame into that same column line?
A: See addendum 4 attached drawings.

Q2: For the canopies, the spec lists Mapes as the manufacturer with flat soffit decking, however the details show more of a louvered sunscreen (no solid decking).
They also list an 8" flat fascia but the drawings show a c-channel.
Can you confirm what they want? If louvered, open to design or a specific louver material/size/shape etc?
A: louvered over windows, flat soffit above the doors.

Q3: For the Novawwall Stretch Fabric (097713), the specification calls for a 4" system, but on the drawings, it seems to indicate a 2" system. Can you please confirm the thickness?
A: On the north wall of the atrium space, 50% of 1" thickness and 50% of 2" thickness for the Novawall system will be used. On the south wall of the atrium space with a basic acoustic fabric wrapped panel with standard sizes. No 4" thick system for Novawall will be used.

Q4: Could you provide clarification on the cooling tower discharge. M301 note 21 calls out for the 1x1 wire mesh to be attached to 4'x4' metal channel. Also noted on M303. I`m assuming this is 4"x4" channel. Please verify.
A: The mesh is 1"x1", but there is a metal U-channel support grid on 48" centers to support the mesh.

Q5: Please confirm flat epoxy tops per section 125300 2.05 item A are acceptable at student workstations.
A: Acceptable

Q6: Addendum 3 confirmed the use of the MBCI designer series fluted panels system but I did not see an updated spec section for this product. Was the specs updated in addendum 3 for this system?
A: See addendum 3 under Specifications #3.
